Project Report

Name: Bhoomika Kushwaha

Branch: CSE (AI&ML)

Year: 1st year

Course code: CSE0001

Date: 31 March 2026

Introduction

This project was completed as part of my Digital Literacy course, where I worked as a Student Digital Ambassador. The main aim was to understand how students can use digital tools in a smart and responsible way, communicate professionally, and stay safe online. The project includes five tasks that focus on areas like digital awareness, creating an online portfolio, exploring learning platforms, email etiquette, and cybercrime awareness. While working on these tasks, I got hands-on experience with tools like Canva, GitHub, LinkedIn, HackerRank, and Google Forms. Overall, this project helped me build useful digital skills and become more aware of my online behavior.

Task-1 Create a Digital Literary Awareness Infographic

For this project, I used Canva to design a visually appealing infographic that highlights essential digital skills and practices for students. Canva provided a user-friendly interface, pre-designed templates, and a library of icons and illustrations, which made it easy to create a professional-looking layout without advanced design experience.

The infographic is divided into four sections: Digital Literacy, Useful Digital Tools for Students, Safe Internet Practices, and Professional Online Presence. Each section uses distinct colours and relevant icons to make the content easy to navigate and understand. For example, blue represents digital literacy, purple for tools, pink for internet safety, and green for professional presence. The design includes concise bullet points and visual cues to emphasize key

information, such as productivity tools, password security, and professional networking tips.

One interesting challenge I faced while making the infographic was condensing detailed information into short, digestible points without losing clarity. Choosing appropriate icons and balancing colour schemes to make the infographic visually appealing while keeping it informative was both creative and educational. Overall, this project helped me better understand digital literacy and online safety while practicing effective visual communication.

Task-2 Build your student Digital Portfolio

For this task, I chose GitHub and LinkedIn as my professional platforms. GitHub is a platform for version control and collaboration, where developers can host, share, and manage code repositories. I create profile README that includes my name, branch, year, and a short statement about what I hope to learn.

This README serves as my public portfolio and a way to showcase my coding projects over time. LinkedIn is a professional networking platform where I filled in my Education section with my current degree, institution, and expected graduation year. This allows me to connect with peers, professionals, and potential recruiters. Over the next four years, I plan to use GitHub to document and share all my coding projects, explore open-source contributions, and track my growth as a developer. On LinkedIn, I aim to build a strong professional network, share my achievements, and look for internships or collaborative opportunities.

Together, these platforms will help me showcase my skills, record my learning journey, and create career opportunities.

Task-3 Explore Coding & Collaboration Platforms

For this task, I used HackerRank, GitHub, and Google Forms to explore coding practice and cloud collaboration tools. On HackerRank, I created an account and completed a beginner-level challenge, Solve Me First, which helped me practice basic programming logic and understand how coding platforms evaluate solutions. I also captured my completion screenshot and added it to my repository. On GitHub, I organized all my work, including screenshots and links, which improved my ability to document and present my progress professionally.

For the collaboration part, I used Google Forms to create a Digital Literacy Awareness Quiz with five questions, including multiple-choice and short-answer types. I also linked the responses to a Google Sheet to view and analyze the data. This helped me understand how to collect and manage information efficiently.

These platforms will be highly useful in my academic journey. HackerRank will help me strengthen my coding skills through regular practice, GitHub will allow me to maintain a portfolio of my work, and Google Forms will assist in conducting surveys and collaborative tasks. Overall, these tools will enhance my technical skills, organization, and productivity.

Task-4 Draft a Professional Email & Etiquette Guide

In today's digital world, the way we communicate online really matters. For example, imagine a student sending a message to a professor without a proper subject, greeting, or clear explanation. It might come across as rude or confusing, even if that wasn't the intention. Because of this, the professor might ignore the email or misunderstand the request, which could create unnecessary problems for the student.

This situation could easily be avoided by following simple email etiquette. Writing a clear subject line, starting with a polite greeting, and explaining the situation properly can make a big difference. Ending the email respectfully also leaves a good impression. Small things like these help ensure that the message is understood correctly. Overall, communicating clearly and respectfully online helps avoid misunderstandings and creates a more positive and professional image.

Task-5 Cybercrime Awareness Case Study & Prevention Guide

While researching cybercrime, what surprised me the most was how simple and convincing many scams are. Most victims are not careless; they are just unaware or act quickly without verifying details. For example, even a normal-looking message or QR code can lead to financial loss. It made me realize how easily anyone, including students like me, can become a target.

This task helped me understand the importance of being cautious while using digital platforms, especially for payments and sharing

personal information. One habit I will definitely change is being more careful before clicking on links or making any online transactions. I will always double-check the source and verify details before taking any action. Overall, this activity made me more aware and responsible about my online behavior and safety.

Conclusion

Overall, this project was a valuable learning experience for me. It helped me understand the importance of digital literacy in everyday student life. I learned how to create a simple online presence, use different digital platforms, and communicate more professionally. The tasks also made me more aware of online safety and cyber threats. Working on this project improved my confidence in using tools like GitHub, Canva, and Google Forms. It also taught me how to present information clearly and responsibly. I believe these skills will be very useful for my academic journey and future career.
